

DevOps Journey — Step 1: Git & GitHub

A simple Git & GitHub command reference designed for reading on iPad while coding or studying DevOps.

1. Terminal Basics

Command	Use
ls	List files and directories
ls -a	Show all files including hidden files
cd <folder>	Move into a directory
cd ..	Go back one folder
pwd	Show current directory path
mkdir <name>	Create a new folder
touch <file>	Create a new file
rm <file>	Delete file
rm -rf <folder>	Delete folder and contents
clear	Clear terminal screen

2. Git Setup

Command	Use
git init	Initialize Git repository
git config --global user.name "Name"	Set Git username
git config --global user.email "Email"	Set Git email

3. Working With Files

Command	Use
git status	Show repository state
git add <file>	Stage file
git add .	Stage all files
git commit -m "message"	Save snapshot
git log	View commit history
git diff	Show changes

4. GitHub Integration

Command	Use
git remote add origin <url>	Connect repo to GitHub
git push origin main	Upload code
git pull origin main	Download updates
git clone <url>	Copy repository locally

5. Branching

Command	Use
git branch	Show branches
git branch <name>	Create branch
git checkout <name>	Switch branch
git merge <branch>	Merge branches

git fetch	Download remote changes
-----------	-------------------------

6. Basic Workflow

Step	Command
Go to project folder	cd my-project
Initialize git	git init
Create file	touch index.html
Check status	git status
Stage file	git add index.html
Commit	git commit -m 'Initial commit'
Connect GitHub	git remote add origin <url>
Push project	git push origin main
